Lecture #16: Quine-McCluskey

This topic is only for your own reading only.

- A tabulation method similar in concept to K-map
- Applicable for functions with any number of variables
  - K-maps are useful for functions with at most 5 or 6 variables
- Tedious on paper, but can be automated (programmed)
- Non-examinable
  - But knowing it may enhance your understanding of K-maps

PIs and EPIs

- To find the simplest SOP expression from a K-map, you need to obtain:
  - Minimum number of literals per product term; and
  - Minimum number of product terms.
- Achieved through K-map using
  - *Biggest groupings* of minterms (prime implicants) where possible; and
  - *No redundant groupings* (look for essential prime implicants)

Eg #1: F(A,B,C,D) = Σm(2,3,4,5,7,8,10,13,15)

Step 1: List out all minterms in groups with same number of 1s in their binary codes.

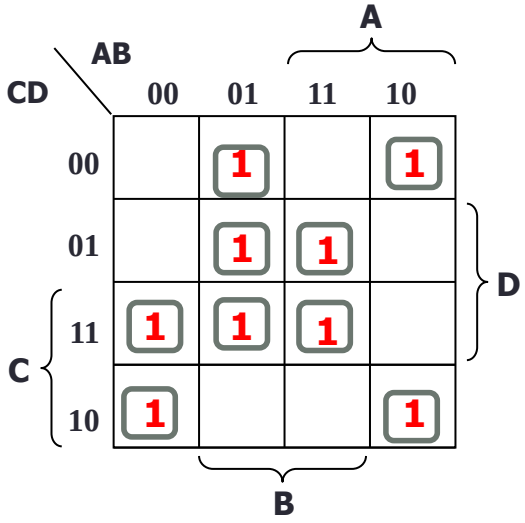
1st column

2: 0010
4: 0100
8: 1000
} Codes with one 1

3: 0011
5: 0101
10: 1010
} Codes with two 1s

7: 0111
13: 1101
} Codes with three 1s

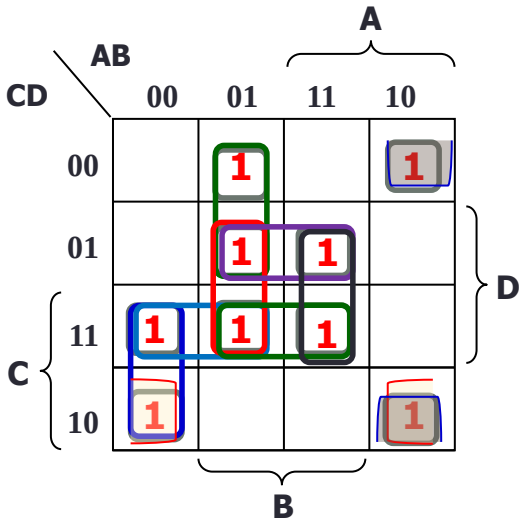
15: 1111
} Codes with four 1s



Eg #1: F(A,B,C,D) = Σm(2,3,4,5,7,8,10,13,15)

Step 2: Combine codes that differ by 1 bit into bigger group, write the combined code in next column.

1st column	2nd column	
✓ 2: 0010	2,3: 001-	Codes with one 1
✓ 4: 0100	2,10: -010	
✓ 8: 1000	4,5: 010-	
----------	8,10: 10-0	
✓ 3: 0011	----------	
✓ 5: 0101	3,7: 0-11	Codes with two 1s
✓ 10: 1010	5,7: 01-1	
----------	5,13: -101	
✓ 7: 0111	----------	
✓ 13: 1101	7,15: -111	Codes with three 1s
----------	13,15: 11-1	
✓ 15: 1111		



Eg #1: F(A,B,C,D) = Σm(2,3,4,5,7,8,10,13,15)

Step 3: Repeat step 2 – Combine codes that differ by 1 bit into bigger group, write the combined code in next column.

1st column

- ✓ 2: 0010
- ✓ 4: 0100
- ✓ 8: 1000

- ✓ 3: 0011
- ✓ 5: 0101
- ✓10: 1010

- ✓ 7: 0111
- ✓13: 1101

- ✓15: 1111

2nd column

- 2,3: 001-
- 2,10: -010
- 4,5: 010-
- 8,10: 10-0

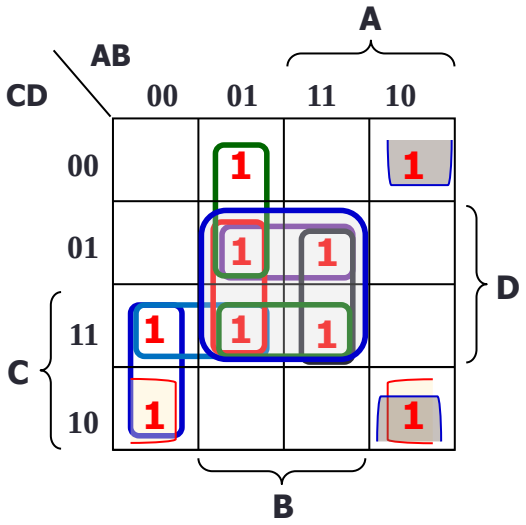
- 3,7: 0-11
- ✓ 5,7: 01-1
- ✓5,13: -101

- ✓ 7,15: -111
- ✓13,15: 11-1

3rd column

5,7,13,15: -1-1

~~5,7,13,15: -1-1~~



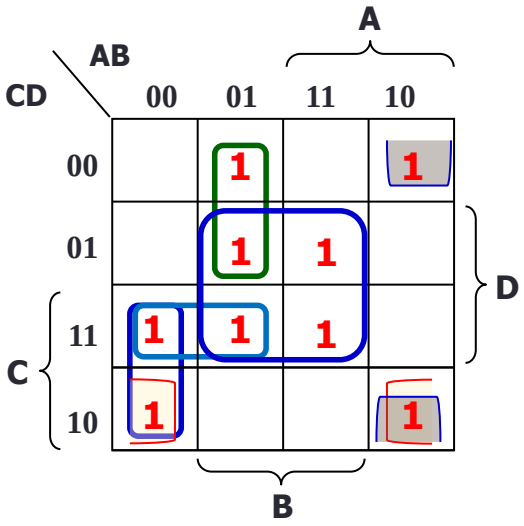
We have completed Phase 1: Identifying all the Prime Implicants (PIs)!

Eg #1: F(A,B,C,D) = Σm(2,3,4,5,7,8,10,13,15)

Phase 2: Identify the Essential Prime Implicants (EPIs)

- Draw the PI chart

	2	3	4	5	7	8	10	13	15
2,3: 001- (A'.B'.C)	✓	✓							
2,10: -101 (B.C'.D)	✓						✓		
EPI 4,5: 010- (A'.B.C')			✓	✓					
EPI 8,10: 10-0 (A.B'.D')						✓	✓		
3,7: 0-11 (A'.C.D)		✓			✓				
EPI 5,7,13,15: -1-1 (B.D)				✓	✓			✓	✓



Where are the EPIs? Look for columns containing a single tick.

EPIs are: A'.B.C', A.B'.D', and B.D

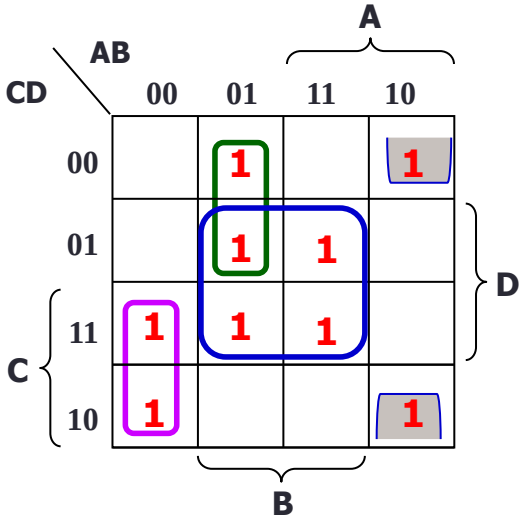
But we are not done yet. There are still minterms not covered by the EPIs!

Eg #1: F(A,B,C,D) = Σm(2,3,4,5,7,8,10,13,15)

Phase 2: After identifying the EPIs

- Draw the reduced PI chart if there are minterms not covered

	2	3	4	5	7	8	10	13	15
2,3: 001- (A'.B'.C)	✓	✓							
2,10: -101 (B.C'.D)	✓						✓		
EPI 4,5: 010- (A'.B.C')			✓	✓					
EPI 8,10: 10-0 (A.B'.D')						✓	✓		
3,7: 0-11 (A'.C.D)		✓			✓				
EPI 5,7,13,15: -1-1 (B.D)				✓	✓			✓	✓



1. Find out what are the minterms covered by the EPIs.
2. Remove the EPIs and minterms they cover from the chart → reduced PI chart.
3. Find the minimum number of remaining PIs to cover the remaining minterms.

Answer:
B.D + A'.B.C' + A.B'.D' + A'.B'.C

Eg #2: F(A,B,C,D) = Σm(2,3,13) + Σd(4,5,6,7,9)

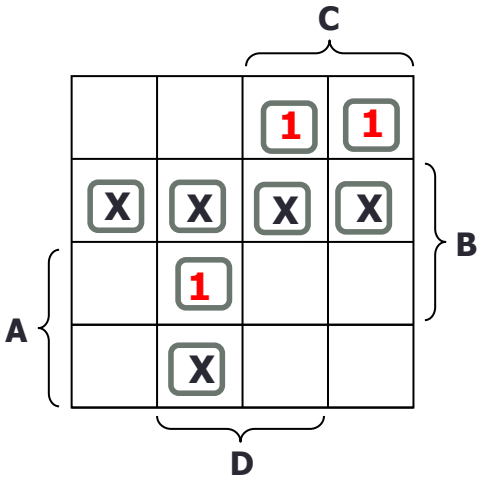
Step 1: List out all minterms in groups with same number of 1s in their binary codes.

1st column

2: 0010
4: 0100
} Codes with one 1

3: 0011
5: 0101
6: 0110
9: 1001
} Codes with two 1s

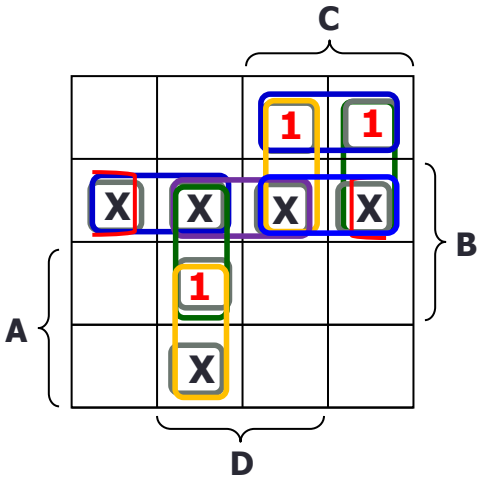
7: 0111
13: 1101
} Codes with three 1s



Eg #2: F(A,B,C,D) = Σm(2,3,13) + Σd(4,5,6,7,9)

Step 2: Combine codes that differ by 1 bit into bigger group, write the combined code in next column.

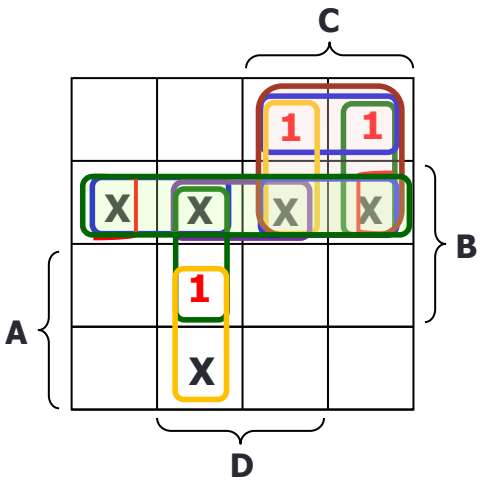
1st column	2nd column	
✓✓ 2: 0010	2,3: 001-	Codes with one 1
✓✓ 4: 0100	2,6: 0-10	
----------	4,5: 010-	
✓✓ 3: 0011	4,6: 01-0	
✓✓✓ 5: 0101	----------	
✓✓✓ 6: 0110	3,7: 0-11	Codes with two 1s
✓ 9: 1001	5,7: 01-1	
----------	5,13: -101	
✓✓✓ 7: 0111	6,7: 011-	
✓✓ 13: 1101	9,13: 1-01	



Eg #2: F(A,B,C,D) = Σm(2,3,13) + Σd(4,5,6,7,9)

Step 3: Repeat step 2 – Combine codes that differ by 1 bit into bigger group, write the combined code in next column.

1st column	2nd column	3rd column
✓ 2: 0010	✓ 2,3: 001-	2,3,6,7: 0-1-
✓ 4: 0100	✓ 2,6: 0-10	~~2,6,3,7: 0-1-~~
---	✓ 4,5: 010-	4,5,6,7: 01--
✓ 3: 0011	✓ 4,6: 01-0	~~4,6,5,7: 01~~
✓ 5: 0101	---	
✓ 6: 0110	✓ 3,7: 0-11	
✓ 9: 1001	✓ 5,7: 01-1	
---	5,13: -101	
✓ 7: 0111	✓ 6,7: 011-	
✓ 13: 1101	9,13: 1-01	



Not a PI because it contains all don't cares.

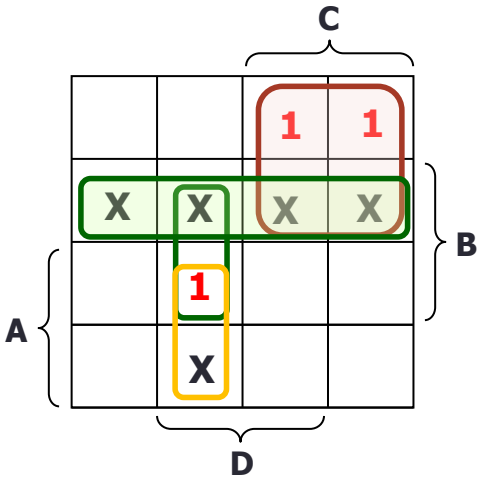
We have completed Phase 1: Identifying all the Prime Implicants (PIs)!

Eg #2: F(A,B,C,D) = Σm(2,3,13) + Σd(4,5,6,7,9)

Phase 2: Identify the Essential Prime Implicants (EPIs)

- Draw the PI chart

	2	3	13	4	5	6	7	9
EPI 2,3,6,7: 0-1- (A'.C)	✓	✓				✓	✓	
5,13: -101 (B.C'.D)			✓		✓			
9,13: 1-01 (A.C'.D)			✓					✓



Where are the EPIs? Look for columns containing a single tick.

EPI: A'.C'

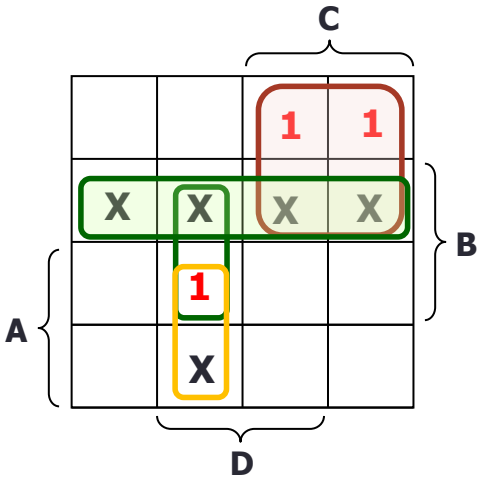
But we are not done yet. There are still minterms not covered by the EPIs!

Eg #2: F(A,B,C,D) = Σm(2,3,13) + Σd(4,5,6,7,9)

Phase 2: Identify the Essential Prime Implicants (EPIs)

- Draw the PI chart

	2	3	13	4	5	6	7	9
EPI 2,3,6,7: 0-1- (A'.C)	✓	✓				✓	✓	
5,13: -101 (B.C'.D)			✓		✓			
9,13: 1-01 (A.C'.D)			✓					✓



Where are the EPIs? A'.C'

1. Find out what are the minterms covered by the EPIs.
2. Remove the EPIs and minterms they cover from the chart → reduced PI chart.
3. Find the minimum number of remaining PIs to cover the remaining minterms.
   Either B.C'.D or A.C'.D

Answer: A'.C' + B.C'.D or A'.C' + A.C'.D

End of File
